IADB's Share of voice on twitter from Colombia

The Problem

There is a conversation in social network where people are mentioning our organization and our competitors. The problem is that we don't know how much of the conversation we owned compared to our competitors.

The Question

 How many mentions we have and how does that compared to our competitors?

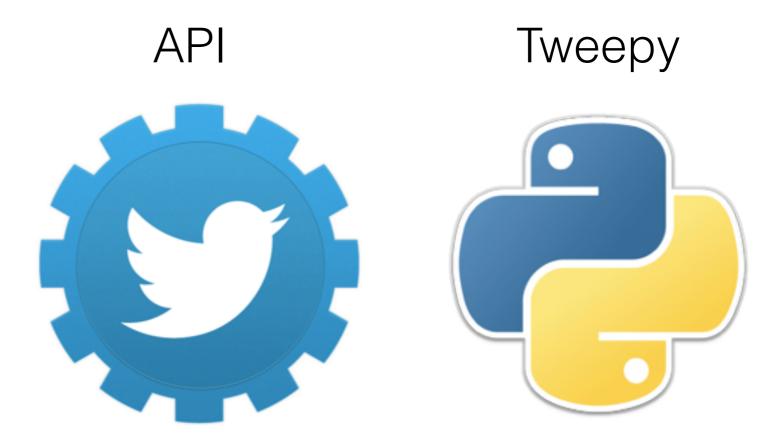

The Data

April 20th to May 28th

Data cleaning

Raw data: 67,156 tweets

After cleaning: 53,987 valid tweets

Creation of 2 fields:

- 1) Brand
- 2) Country

Brand

BRAND BID BANCO MUNDIAL CAF	UNDEFINED
-----------------------------	-----------

Search for patterns in the tweet's text to assign a brand

Example

BID

RT @el_BID 5 maneras de usar la #tecnología para mejorar la #movilidad urbana http://t.co/UXvUw703N6 @BID_Ciudades http://t.co/VZB1bvpAEi

RT @EFEnoticias: El BID aconseja reformas para salvar la pensión de 80 millones de personas en A.Latina http://t.co/NKORj8qlzD

BANCO MUNDIAL

Banco Mundial destaca estrategia económica de México http://t.co/zVPds2xkUu::590246511759470592

@BancoMundial Las razones en la caída de los precios del crudo son diversas

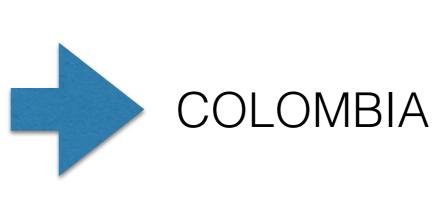

Regex is the best and optimal option

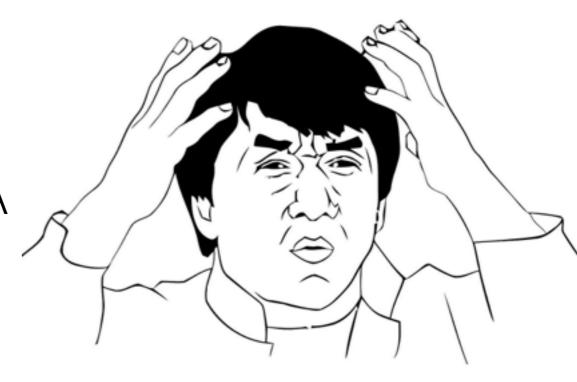

Country

Twitter profile location field allows the user to input 'anything' they want :(

Example:

Bogot
Bogot
bogot
Bogot - Colombia
Bogot Colombia
Bogot Colombia
Bogot Colombia.
Bogot D.C
Bogot D.C - Colombia
Bogot D.C.
Bogot D.C. Colombia
Bogot-Colombia
Bogota
bogota
Bogota
BOGOTA
Bogota - Colombia
Bogota Colombia
Bogota D.C.
Bogota y Colombia Human

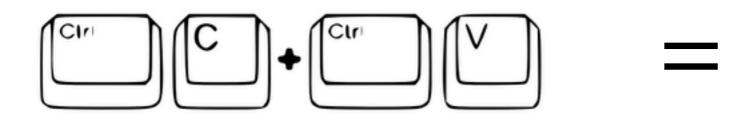

First attempt (Make it manually)

```
213 twData['isColombia'] = twData.tweetUserLocation.str.strip().map({
214 'BARRANQUILLA':1, 'BARRANQUILLA - COLOMBIA':1
215 , 'BARRANQUILLA COLOMBIA':1, 'BOGOT':1, 'BOGOT - COLOMBIA':1, 'BOGOT COLOMBIA':1
216, 'BOGOT COLOMBIA.':1, 'BOGOT D.C':1, 'BOGOT D.C - COLOMBIA':1, 'BOGOT D.C.':1
217, 'BOGOT D.C. COLOMBIA':1, 'BOGOT-COLOMBIA':1, 'BOGOTA':1, 'BOGOTA - COLOMBIA':1
218, 'BOGOTA COLOMBIA':1, 'BOGOTA D.C.':1, 'BOGOTA Y COLOMBIA HUMANA':1, 'BUCARAMANGA':1
219 , 'CALI':1, 'CALI - COLOMBIA':1
220 , 'CALI COLOMBIA':1, 'CALI- COLOMBIA':1
221 , 'CALI-COLOMBIA':1, 'CARTAGENA':1
222, 'CCUTA COLOMBIA':1, 'COLOMBIA':1
223 , 'COLOMBIA | MXICO | ESPAA':1, 'MANIZALES':1
224 , 'MEDELLIN':1, 'MEDELLIN - COLOMBIA':1
225 , 'MEDELLIN COLOMBIA':1, 'MEDELLN':1
226 , 'MEDELLN - COLOMBIA':1, 'MEDELLN COLOMBIA':1
227 , 'PASTO':1, 'PASTO - NARIO - COLOMBIA':1
228 , 'PASTO COLOMBIA!!':1, 'PEREIRA':1
229 , 'SANTA MARTA - COLOMBIA':1, 'SANTA MARTA COLOMBIA':1
230 , 'VALLEDUPAR':1, 'VALLEDUPAR COLOMBIA':1
```

Results: 2,185 matches

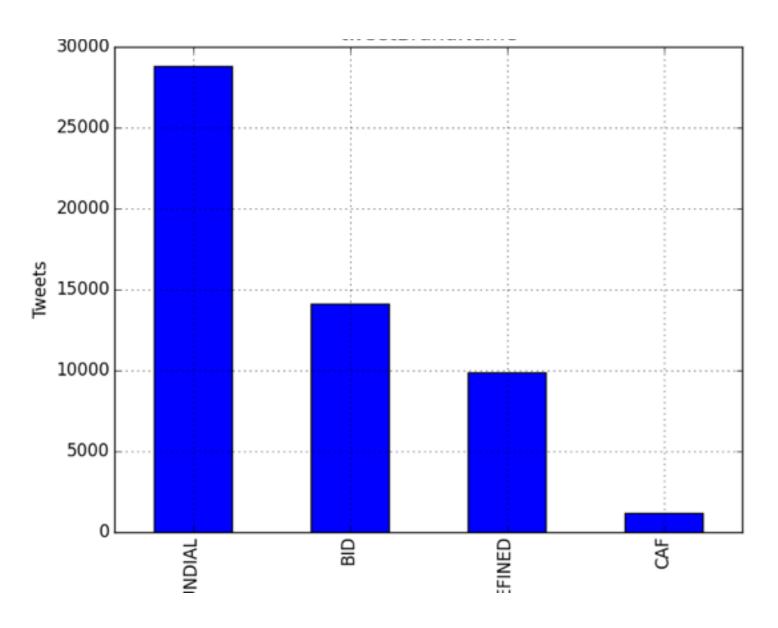

- Go to wikipedia
- Look for Colombia states, cities and counties
- Make a csv file
- Write code to match with the correct pattern

```
Regex
153 terms = pd.read_csv('Terms.csv', parse_dates=True)
154 #accent removed
155 termsCleaned = []
156 for term in terms['TERM']:
       termsCleaned.append(term.encode("ascii", "ignore").strip())
159 #removing common places in other countris(the following list is irrelevant for our study)
160 #FLORENCIA, CÓRDOBA, AMAZONAS, LA PLATA, MADRID
161 termsCleaned.remove('FLORENCIA')
162 termsCleaned.remove('CRDOBA')
163 termsCleaned.remove('AMAZONAS')
164 termsCleaned.remove('LA PLATA')
165 termsCleaned.remove('FLORIDA')
166 termsCleaned.remove('MADRID')
168 #mapping twData.tweetUserLocation with terms cleaned
170 for location in tweetUserLocation:
       flag = 0
       op1 = '''\\b'''
173
       op2 = '''\\b'''
174
175
       for place in termsCleaned:
176
           if not (re.search(r""+op1+place+op2,location.flaas=re.IGNORECASE)) is None:
177
               tweetisColombia.append("1")
178
               flag = 1
179
               break
       if flag == 0:
           tweetisColombia.append("0")
```

Results: 3,268 matches

Conclusion

Collecting data with python is the best and faster option. Performance and usability is easier than other languages like php, c#, c++. The challenge is to build the data-frame. Once that is complete you only have to analyze the data, make connections and write the code to look for matches.

Recommendations

- Use a data base to collect data (don't use csv files)
- Run the algorithm every two days
- Getting real time data will prevent you from collecting the engagement information (Favs and RTs)
- Regular expression is a topic that you need to explore more deeply
